# OVERVIEW

The Institute of Chartered Accountants of Pakistan (ICAP) is the premier regulatory body for accountancy profession in Pakistan. Over 25% of our total membership is based outside Pakistan and is recognized internationally for their professionalism, technical expertise, adherence to strong ethics & integrity. ICAP is connected with its members through chapters/committees located in 10 countries in different regions including North America, UK, Middle East, Australia and South East Asia.

The Overseas Coordination Committee (OCC) of ICAP has been constituted to oversee the international collaborations and establish swift connectivity with overseas members whereby chapters' management committees take necessary measures, under the guidance of OCC, to conduct networking events and provide due support according to local best practices for employability and appropriate settlements.

We at ICAP, strongly believe in enabling professional excellence and have conceived an idea to create an event which will be easier to engage all locations in different time zones on a single day and decided to convene its first all-virtual CA Pakistan Overseas Convention on Friday, 13th of January 2023

# ABOUT CA PAKISTAN OVERSEAS CONVENTION

The convention is aiming to engage practiced economists, policymakers, proficient finance professionals, business thought leaders, collaborating partners, corporate executives, start-up architects, and multifaceted individuals from across the globe. While this convention may result in expanded networks for many, it will be an absolute occasion for ICAP to play its due role in difficult economic situations by connecting local businesses with the international community and building intergovernmental engagements.

The convention's theme "Seizing Opportunities from Economic Crisis" has been designed in line with the perceived global economic conditions and an effort is being made to determine and discuss how the opportunities may be extracted in such circumstances

Employability and labor productivity can be enhanced through skills development which can contribute to structural transformation and economic growth and would help countries to become more competitive. The public and private investment in the education and training systems may enable better employability and productivity for both the current and future workforces. Conversations on people skill development will cover topics such as perceptive, technical, digital and social skills development.
